

XLP™ Plug-in Hybrid Electric Upfit

XL Fleet's award-winning XLP plug-in hybrid electric drive technology is now available for a range of fleet vehicles from General Motors, including the Chevrolet and GMC 3500 / 4500 cutaway chassis. The electrification system that was named one of TIME Magazine's Best Inventions of 2019 is now available for use with these versatile GM platforms for package delivery, utility and shuttle applications

Fleet-Ready™

Like all XL Fleet systems, the XLP plug-in hybrid electric GMC and Chevrolet cutaway chassis are ready to be deployed today for the most demanding drive cycles and applications, without impacting OEM warranties or vehicle performance.

Reduce Emissions and Improve Fuel Economy

Our XLP plug-in hybrid electric drive system delivers up to a 50% increase in miles per gallon* and significantly decreases CO2 emissions. It's an ideal way to make immediate progress on sustainability goals without having to wait for all-electric products to become available or charging infrastructure to be deployed more broadly.

*Actual MPG may vary based on driver behavior, drive cycle and other factors.

XLP™ Plug-In Hybrid Electric Drive System

XL Fleet has pioneered a plug-in hybrid system that is revolutionary in its simplicity. In addition to regenerative braking, the XLP features a volume production-ready, high voltage lithium battery pack. XLP is compatible with Level 1 and Level 2 charging using an industry-standard J1772 plug interface, and the XLP system has no special maintenance requirements.

XL Plug-in GM 3500 / 4500 Cutaway

Engine (gasoline)	6.6L
Wheelbase	All

Installation available for new vehicles and retrofits.

Configuration and model year availability may vary. Contact your XL Fleet sales manager for details.

Intelligent Decisions

Our proprietary, cloud-based, vehicle connectivity platform provides actionable intelligence, including speed, idling, vehicle drive cycle and CO2 emissions reduction.
