

Fleet Electrification

Fleet-Ready™ Electrification Solutions

XLhybrid™ | **XL**plug-in™ | **XL**Link™

**Up to \$9,000
HVIP Incentives
Hybrid Upfits**

XL was the first electrification provider in Ford's eQVM program.

The Most CARB EOs in the Automotive Industry

XL, the leader in connected fleet electrification solutions, offers hybrid and plug-in hybrid electric drive systems for many of the most popular and proven OEM fleet vehicles. XL has earned the highest number of CARB executive orders for commercial vehicle electrification in the entire automotive industry, and we continue to help commercial and municipal fleets save money and meet sustainability goals, without compromising performance or operations.

Fleet-Ready™

XL systems install quickly and easily onto factory vehicles, so they're ready to work within your existing fleet – with no driver training, special fueling infrastructure or range concerns. The OEM powertrain and vehicle warranty remain completely intact, and our system is protected by a no-nonsense 3 year / 75,000 mile warranty.

Big Savings

Our XLH hybrid electric drive system delivers an average 25% increase in miles per gallon*, and our XLP plug-in hybrid electric system increases MPG by 50%*. Both systems significantly decrease CO2 emissions and improve productivity, as drivers spend more time driving and less time refueling at the pump.

Superior Performance

XL vehicles drive just like conventional trucks in your fleet. Our customers have driven well over 75 million miles with XL systems, with a proven track record of over 99% vehicle uptime. If our system does experience a problem, it won't disable the vehicle – and our XL Link telematics program immediately alerts our service team.
